Spinal Cord Stimulation

"Fight pain without opioids"

Spinal cord stimulation (SCS) is one of the most advanced pain therapies available today. This revolutionary treatment can provide long-term pain relief while reducing or even eliminating the need for opioids.

Spinal cord stimulation uses electricity to block pain signals. A small battery, which is implanted beneath the skin, generates mild electric pulses. These electric pulses are carried by small wires, called leads, to the nerves causing the pain. The pulses "stimulate" the nerves, masking pain signals before they reach the brain.

SCS can provide years of significant chronic pain relief without the use of prescription pain medications.

Spinal Cord Stimulation

Long-term, opioid-free chronic pain relief

WHAT IS A SPINAL CORD STIMULATOR?

THE GENERATOR

A small battery that generates mild electrical pulses. This is implanted in your body.

THE LEADS

Thin, insulated wires that are implanted in the body and carry the electrical pulses to your spinal cord.

THE PATIENT CONTROL

You can adjust the strength and location of stimulation with a handheld remote or even an app on your mobile device.

IS SCS THERAPY **RIGHT FOR ME?**

- Do you have chronic, debilitating pain that has lasted longer than three months?
- Have you tried and failed • conservative pain therapies?
- Don't want to pursue surgery due to risks and long recovery?

If yes, then SCS may be the right solution for your pain.

Conditions commonly treated with spinal cord stimulation:

- Complex regional pain syndrome
- Diabetic peripheral neuropathy .
- Degenerative disc disease .
- Post-surgery pain
- Back pain
- Neck pain
- Foot pain
- Limb pain
- Knee pain
- Ankle pain

WHAT ARE THE **BENEFITS OF SCS?**

Along with providing significant pain relief, SCS offers a host of other benefits that make it one of the best pain treatments available.

It's Safe

- Minimally-invasive procedure
 - Reduces need for opioids
 - Reduces need for riskier surgeries

It's Economical

- Covered by insurance
- Reduces opioid and clinic visit costs
- No need for more expensive surgeries

It's Convenient

- Patient controls stimulation settings
- Charges wirelessly via external device
- Some models don't require recharging
- Fully MRI compatible
